

HAND HELD SENSOR METER

The AQUA-TEL Meter consists of a battery pack and meter in a conveniently sized package. A push-button on the side of the chassis turns on both the meter and power to the AQUA-TEL Sensor (purchased separately) for easy one-handed operation.

The meter is compatible with the standard 0-1-milliamp output AQUA-TEL. The meter can also display the soil temperature when connected to an AQUA-TEL TDR+T Sensor (purchased separately).

Optional: Capacity to read other types of sensors. (At an Additional Cost)
